

## UX/UI Designer

O'Shaughnessy Asset Management, LLC (OSAM) is building an industry-first, modern investing operating system called Canvas and is seeking a talented UX/UI designer to drive the design of the web application from the early days. The position provides a rare opportunity to gain exposure to the multi-billion dollar financial services industry by working directly with early users of a brand new, cutting edge platform.

Canvas is an investment platform that gives professional investment advisors the ability to fully customize investment strategies that are tailored to their client's individual needs. The job requires designing intuitive UI workflows for complex tasks and creating interfaces that are both useful and visually engaging.

OSAM works on a Microsoft tech stack; ideally a candidate will have some working knowledge of .NET development.

### **Desired Skills/ Experience:**

- \* 2+ years of experience in web design with a focus on UI/UX.
- \* A portfolio of design work that can be reviewed by the OSAM staff.

\* As of 12/31/19. The AUM and AUA combined total represents \$5.7 billion of O'Shaughnessy Asset Management assets under management and \$0.6 of assets under advisement. The information regarding AUA is supplemental, OSAM does not have control over the assets under advisement, implementation of the models, or execution of the trades. Numbers may not add up due to rounding.
